Berlin, Germany
Citizenship: Romanian

PROJECTS

- Pokedex, a small web app built using HTML5, CSS3 and Javascript. It uses an external API and users can view a list of Pokemons, view details about them, search a Pokemon by name. The live app can be found here: <https://cnjlv.github.io/Pokedex/>
- myFlix is a very important project for me because of its complexity. First I built the server-side of the app with my own REST API using a non-relational database. After that I build the client-side of the application using React. Its purpose is to allow users to register, login, view information about movies, add and remove them from favorites and update their information or delete their profile. More information on:
 - Client-side: <https://github.com/cnjlv/myFlix-client>
 - Server-side: https://github.com/cnjlv/movie_api
 - Live app: <https://marilynmonroemovies.netlify.app/>
- Personal portfolio built using HTML5 and CSS3. It was my first ever project, it was built as part of my first Achievement at CareerFoundry and its main purpose was to be able to present my work. It can be found here: <https://cnjlv.github.io/portfolio-website/>

EXPERIENCE

Flight attendant

EasyJet Europe Airline | Nov 2018 - Jan 2021

- Kept an organized working space for my colleagues but also for our more than 150 passengers we greeted daily so they could have a pleasant experience.
- Made use of our crew resource management training to ensure our communication and performance was 100% successful .
- Used selling techniques such as up-selling or cross-selling and managed to increase sales percentage by at least 15% on each flight.
- Made use of my language skills in many occasions, in order to solve important problems three times faster than usual.
- Kept time management in mind at all times, which helped deliver significantly faster arrivals by at least 15 to 20% but also increased the time and attention that were dedicated to each customer by a similar percentage.

ACADEMIC EDUCATION

CareerFoundry

Full-Stack Web Development Program

- Attended from Feb 2021 to Aug 2021
- Full-time intensive course
- Built my personal portfolio from scratch along with many other projects such as the client and server side of a single page application by building an API with my own database that I later used for the client-side of my app to retrieve all the information.

University of Alcala

Modern Languages and Translation

- English, Spanish and German translation
